

Make your own copy of the lab

Choose either method in JupyterHub. Both create the same folder in your home directory.

OPTION 1

Use the Terminal

1 Open a Terminal from the JupyterHub launcher.

2 Run this command:

```
cp -R \  
/data/POSYDON-school/3_Wednesday_26_8_26/XLF_lab \  
"$HOME/"
```

3 Open Lab1_simulating_the_XLF.ipynb in \$HOME/XLF_lab.

OPTION 2

Use the file browser

1 Navigate to the shared school folder:

```
/data/POSYDON-school/3_Wednesday_26_8_26/
```

2 Copy the folder XLF_lab.

3 Go to your Home folder and paste it there.

4 Open Lab1_simulating_the_XLF.ipynb inside your copy.

! Work only in \$HOME/XLF_lab — leave the shared /data/POSYDON-school/ folder unchanged.
